

AI'S IMPACT

and how it should be used

AI should be allowed with no restrictions

1. AI is already very prominent
 - a. AI is everywhere; it's being used by many large companies already.
2. The people who are “let go” can work at other places
 - a. We will have more people working on jobs AI cannot do yet
 - b. We will have fewer people working the jobs AI can mostly do.
3. AI is much faster than humans
 - a. AI can write many more pieces much faster than a human.
 - b. If we have the power of AI and it takes less humans to write a piece, we can work on multiple pieces at once.
