To whom it may concern:

Hello, my name is Desmond S., I am a 7th grade student attending lakeside middle school. I am writing this letter because I think A.I should not have copyright on images.

To start, although AI is creating a "new image" It is pulling things already made from people. AI uses the internet to search for the prompt you have typed up, which means that they are finding things already created by humans. Lets say someone makes a dog picture and post it to the web, and then another person on Chat GPT for example types up the prompt "Make me a dog picture" The AI will most likely search the web to find a dog picture change maybe the color then generate it. This picture is already made by someone meaning that the creator had copyright and not owned by the AI. AI is also not a human which means technically it can't have copy right over an image.

This shows why I believe that AI should not have copy right over images.

I await your response and appreciate your dedication to addressing the evolving challenges in the realm of copyright.

Sincerely,

Desmond S
