Dear Copyright Office

Copyright has become a big issue when it comes to AI generated art. I think the copyright should go to the person who wrote the prompt into the AI art generator. I think this because that person came up with the idea to make the image and was smart enough to write a prompt that would make a good looking picture. However I think there should be a system so that when people post art online they have the ability to prohibit AI from using their art. This way people don't have to worry about their precious art being used to make money or other products.

When AI is being trained to use art they should have access to all images on the internet. This way it can learn with a larger amount of images to use. But those images can not be posted or used in any way. Then when the platform is released to the public the AI will only have access to images that have been given permission to be used by AI.

When there is no human involved in an AI generated image that image is free to use no one can copyright it. I think this is the best solution because the AI doesn't want it because it is just some code that can learn. And the company that created the AI shouldn't get permission because then you can't do anything that you get from ChatGPT without asking for permission from open AI.

For these reasons I think that AI generated art should be legally owned by the person that entered the prompt. And there should be a feature for when someone posts something on Instagram or other social media or websites they should have the ability to make the decision on whether it can be used by AI or not.

I await your response and appreciate your dedication to addressing the evolving challenges in the realm of copyright.

Sincerely,

Bulut
