

# **AI's Impact**

**And how it should be managed**

**We should gradually introduce AI into more and more workforces.**

**My evidence for this decision is the British Industrial Revolution. People lost a lot of jobs really fast. To combat this we gradually introduce new technology to give people time to find new jobs.**

**We should base our education system around AI.**

**My reasoning for this decision is that education prepares students for jobs. AI is taking jobs. We should change our education to fit what jobs are going to be available.**

**We should create new job openings. My reasoning for this decision is the future is AI. AI will accelerate our growth as a species. We should put all our efforts into helping AI do this for us. This means having more people working on enhancing AI. Not only will this create more jobs it will help accelerate our growth as a species.**
