To whom it may concern:

The purpose of this letter is to inform you of my opinion on the rules of AI and what I think the restrictions should be regarding copyright and AI.

If AI models use copyrighted data in training, then the work they produce must credit the owner and not allow the new creator to gain monetary value. For example, if someone tells AI to write a song like Taylor Swift, they should have a note that it was inspired by Taylor Swift and not be able to make money off of the song. Copyright law states that only humans can declare copyright, because AI isn't human, AI generated material cannot be copyrighted.

To summarize, AI can't legally copyright its created material and making something out of copyrighted material has to have a note giving credit to copyright holder of the original work.

I await your response and appreciate your dedication to addressing the evolving challenges in the realm of copyright.

Sincerely,

Andrew B.
